

Dear Sir/Madam,

Re: **APPLICATION FOR THE ROLE OF DEVELOPER**

I have hands-on experience working as a Freelance developer from 2016, working on several software projects for local businesses, as well as software assignments for International students, ranging from A.I. and Machine Learning, to things such as E-commerce platforms etc. I also got extra experience working as an I.T and Computer science lecturer at Datamine Technical Business Institute www.datamineschool.ac.ug. Am currently working as an ICT Manager for a government Nursing School, known as Masaka School of Comprehensive Nursing, Located at Masaka Regional Referral Hospital www.mscn.ac.ug. With over 8 years of experience.

I have worked on several projects developing, upgrading and maintaining web based projects and apps, all among others. Some of them include a Danish football academy-website below located in my hometown. (It is done in Wordpress - Elementor) <https://www.elcambioacademy.com/>. Here, I was inspired to learn template building from scratch, which i did in one of my online job interviews. The wordpress template is in the next link.

Next, I can do front-end development as one of my interview results do show below. I was required to get data of one patient from a Backend-API and replicate the design given to me.

This was their xd image-design.

This was my implementation

Also below are demo videos of my other work, among so many. I did them in PHP, JavaScript and bootstrap. They are not hosted but rather, they are used locally by their respective business owners.

I made some demo videos. Just to mention but a few...., but I am worth much more
