PERSONAL PROJECTS

CAMPUS RECRUITMENT SYSTEM

- Developed a php project for helping students who are looking forcampus placements.
- The aim of the project is to make it easier for students in college and employees to register. Users have easy access to this, and the data can be accessed quickly.

SHOPPINGCART

- A robust and scalable eCommerce platform built with Laravel, designed to simplify online store management, enhance customer experiences, and drive sales effortlessly.
- It's built to be fast, secure, and flexible, making it suitable for small shops and large businesses alike

QUICKBLOG

- This is a blog application allows users to register, log in, and manage their own posts. Visitors can view all blog posts and comments but cannot create, edit, delete, like, or comment on posts..
- Registered users can create new blog posts, edit or delete only their own posts, and interact with posts by liking and commenting..Each post includes a title, content, image, author, and timestamp.
- Users can like a post only once, and the total like count is displayed for each post. The application ensures proper access control, allowing only authorized actions based on user roles.
